

1  
2 ABSTRACT

3       In an embodiment of the invention, a method for  
4 providing a visitor safe wireless printer access point,  
5 includes: connecting a wireless computing device to a  
6 wireless network, where the wireless network provides an  
7 access point to a print spooling device; determining  
8 available printers in a secure wired network; selecting  
9 one of the available printers for printing; establishing a  
10 print path through the spooling device to the selected  
11 printer; sending a print job via the wireless network to  
12 the spooling device; spooling the print job on the  
13 spooling device; and sending the print job via the secure  
14 wired network to the selected printer.
